

BearingPoint®

Tackling tax evasion, increasing financial transparency and implementing new regulations are some of the hottest topics in the financial industry. From QI / FATCA, to the Automatic Exchange of Information, financial institutions are facing challenges such as adaptability to regulatory changes, deadlines looming, data security,... We, at BearingPoint, help them to face all those changes. We deal with an ever-changing environment, we juggle with timelines and we answer to financial institutions' reporting needs. If you are interested in the financial industry, if you are excited about innovation and changes, if you feel comfortable in an international environment, you are ready to join our team.

These will be your tasks

BearingPoint edits several financial software. FiTAX software produces tax reports for the following tax regulations: QI (Qualified Intermediary), FACTA, as well as for the reporting of the Automatic Exchange of Information (AEOI/CRS). We develop, test and implement this tax reporting software used to report more than 2500 financial institutions and banks around the world. FiTAX covers the whole reporting process of financial institutions - from gathering raw data, examining whether client, account or deposit relations have to be reported to the preparation and the transmission of reports.

As a Business Analyst you are involved in the further development of our software for current and new tax regulations. This includes, full business analyses processes from the specifications until the acceptance testing. You will be working closely together with your pairs (experienced and well-recognized experts) and our software developers. After a short training period you will also be in contact with some of our clients (banks and financial institutions).

You're offering these qualifications

- You have a successfully obtained a degree in information systems, business administration, finance or law.
- Excellent interpersonal skills and intellectual curiosity are more than welcome.
- You are dynamic, autonomous and flexible.
